

The report was developed step by step following the exam documentation and requirements. It consists of three structured pages designed for different user roles:

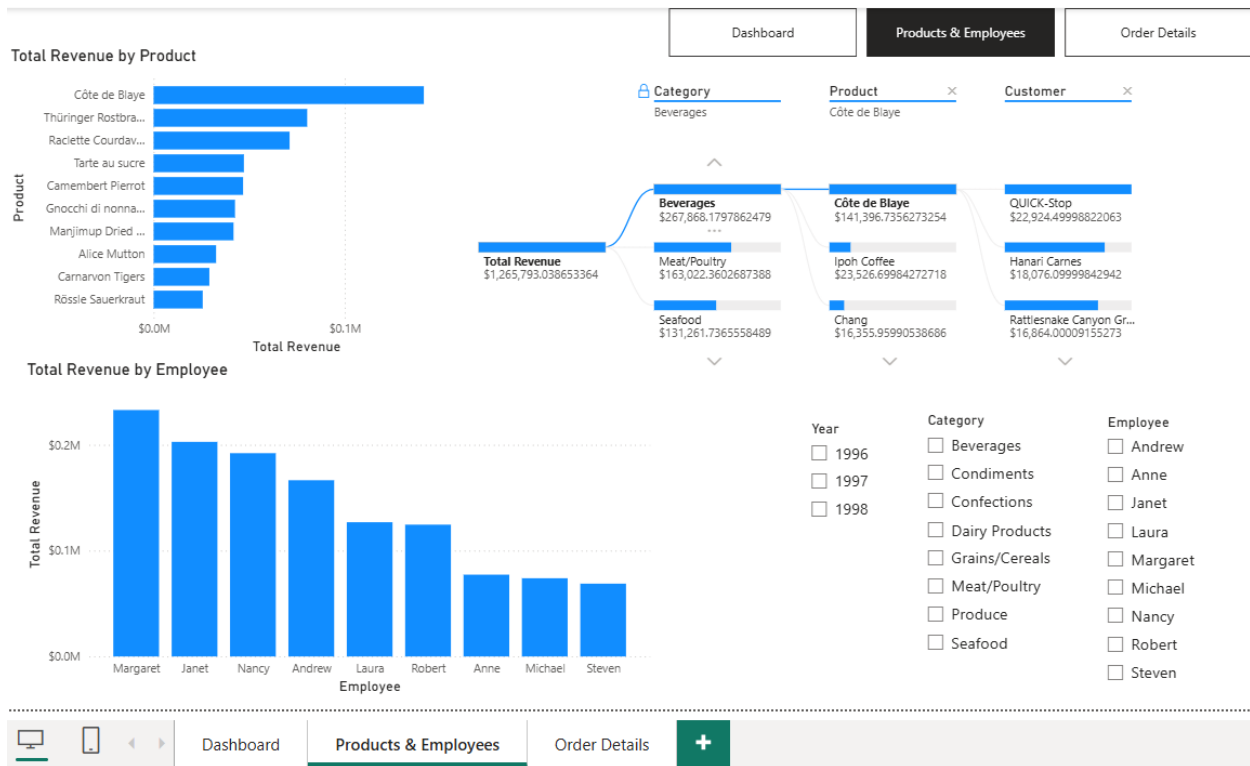

- An **Executive Overview** page presenting high-level KPIs and trends.
- A **Detailed Analysis** page providing deeper insights into product and employee performance.
- A **Drill-Through** page offering transaction-level details for individual orders.

Drill-through functionality was implemented to enable seamless navigation from aggregated metrics to detailed order information. This allows users to investigate specific transactions without overcrowding the main report pages.

Navigation buttons were added to improve usability and ensure a clear, user-friendly flow between pages. The overall design follows reporting best practices, balancing high-level insights with detailed analytical capability.
